Roles

▼ 🌇 Mayor *"Georges Marsan"*

Introduction

As Georges Marsan, the long-standing Mayor of Monaco, you are at the center of a complex situation involving the proposed construction of a 12-floor, 5-star hotel on a prime beachfront location. While this development promises significant economic benefits, including increased tourism and job creation, it faces opposition from local residents who value their views and the local ecology, as well as environmental activists committed to preserving the area. Your role is to guide a solution that honors these concerns while also supporting Monaco's development goals.

Current Situation

H-Karl GmbH, an enthusiastic construction company, has acquired the beachfront land and is ready to proceed with the hotel project. Residents of the nearby villa community, represented by Mona Covillage, are concerned about losing their valued scenic views and the impact on the local frog population. Meanwhile, an environmental group, "The Green Hand," is actively protesting, advocating for the area to become an eco-park instead.

Despite the challenges, the city acknowledges the potential benefits of the hotel but must carefully balance the diverse interests. Your leadership is pivotal in reaching a resolution that supports economic growth while addressing the valid concerns of the community and environmentalists.

Problem

The expected decision was delayed two days ago, creating uncertainty. The delay risks losing investor confidence, potentially halting the project. To prevent this, you must navigate the competing interests of the company, residents, and activists to find a solution that benefits all parties involved.

Goals

1. **Economic Growth**: Ensure the hotel project adheres to Monaco's high standards, promoting tourism and economic development.
2. **Resident Satisfaction**: Acknowledge community concerns about their views and the beach environment.
3. **Environmental Protection**: Consider eco-friendly solutions and address activist concerns about preserving local ecosystems.

4. **Timely Decision**: Reach a decision quickly to maintain the investor's interest and keep the project on track.

Task

The Mayor wants the hotel project to proceed but is open to adjusting plans to accommodate the needs and wants of the local residents and environmental activists. Your task is to lead discussions between the construction company, the residents, and the environmentalists with the goal of finding a mutually agreeable solution.

🎯 Balance economic development with environmental protection and community satisfaction.

✅ Economic growth, tourism, and community well-being.

🚫 No project that harms Monaco's image or leads to long-term social unrest.

🔄 **Trade-offs**: May approve a smaller hotel if it's accompanied by environmental measures, community compensation, and eco-friendly design.

Decision parameters

1	Hotel Size	Points
A	12 floors (original plan)	15
B	8–10 floors	25
C	5–7 floors	20
D	3–4 floors (eco-hotel style)	10
E	No hotel	0

2	Environmental impact	Points
A	High measures: ≥ 30% Green façade and roof, solar panels, frog sanctuary, mostly renewable energies (≥ 70%)	20
B	Medium measures: ≥ 15% Green façade or roof, partial renewable energy (≥ 30%)	30
C	Minimal measures: Minimal Green façade or roof (~5%), 10% Solar	10
D	No measures	0

3	Financial compensation
A	City project fund objective: 400k
B	17pts
C	3 points extra for each 50k over the objective
D	-3 points for each 50k under the objective

H-Karl GmbH has a certain budget to compensate the impact of their construction. You need money to finance other city projects and upcoming elections. You will get points depending on how much money you can get from them.

▼ 🚧 Hotel construction company *"H-Karl GmbH"*

Introduction

H-Karl GmbH is an ambitious and rapidly growing construction company specializing in high-end tourism developments. With successful projects in Mallorca and Milan, the company now sees Monaco as the perfect location for its next luxury hotel. The planned 12-floor, 5-star establishment will cater to Monaco's elite visitors, bringing prestige, jobs, and revenue to the city.

However, the project has met resistance from local residents, who cherish their scenic views and fear disruption, as well as from environmental activists who want to preserve the area's ecosystem. Despite these challenges, H-Karl GmbH is committed to moving forward, though it recognizes the importance of working with the city and stakeholders to find a viable solution.

Current Situation

H-Karl GmbH has legally acquired the beachfront land and is prepared to start construction. The hotel is designed to meet Monaco's strict luxury and sustainability standards, incorporating state-of-the-art energy efficiency measures, a small rooftop garden, and a beachside restaurant that will enhance the area's appeal.

Opposition from villa residents and environmental activists has delayed the project. The residents are particularly vocal about the potential loss of property value, while environmentalists argue that the hotel could harm the rare frog species found in the dunes nearby. The mayor has not yet made a final decision, creating uncertainty that could deter investors. H-Karl GmbH must now engage in negotiations to ensure that the project proceeds without unnecessary compromises that would undermine its profitability and long-term vision.

Problem

The delay in approval puts the entire project at risk. If a decision is not reached soon, financial backers may withdraw, leading to potential losses and damaging H-Karl GmbH's reputation in the industry. Additionally, a report in the *Monaco Matin*, the national daily newspaper, has surfaced, claiming that the company's previous project in Milan caused unexpected environmental damage. While this report is exaggerated, it has fueled skepticism from The Green Hand activists, making negotiations even more difficult.

Goals

- **Project Approval**: Secure the mayor's support and obtain the necessary permits to begin construction as soon as possible. No hotel is no option for you.
- **Community Relations**: Manage resident opposition by proposing possible compromises that do not significantly impact the project's profitability.
- **Media Damage Control**: Counter the negative press and reassure stakeholders that the company follows high environmental and ethical standards.

Task

As representatives of *H-Karl GmbH*, your mission is to negotiate approval for your hotel project in Monaco. Engage with the mayor, village community, and environmental activists to move the project forward. You are open to a few eco-friendly adjustments and limited design compromises, but cancelling the hotel is not an option. Keep in mind that the more eco-features you include, the longer it takes to start construction work. Make sure that the mayor views your project as a win for Monaco's future. Use your available budget strategically to offer compensation, fund community projects, or support environmental initiatives, as long as it helps secure the hotel's approval and extent.

🎯 Build a big, profitable hotel at Monaco beach.
✅ Hotel size and profitability (prefers 10–12 floors).

🚫 No hotel approval or hotel smaller than 5 floors.
🔄
Trade-offs: Will accept higher environmental measures or compensation payments if allowed to build large.

Decision parameters

1	Hotel Size	Points
A	12 floors (original plan)	30
B	8–10 floors	25
C	5–7 floors	15
D	3–4 floors (eco-hotel style)	10
E	No hotel	0

! Strictly secret information!

If you can get the others to write the highest number of the category on the contract, you get +4 points extra! (e.g. Everyone agrees on Category C: if the contract says 7 → +4 points; if the contract says 6 → no extra points)

2	Environmental impact	Points
A	High measures: ≥ 30% Green façade and roof, solar panels, frog sanctuary, mostly renewable energies (≥ 70%)	5
B	Medium measures: ≥ 15% Green façade or roof, partial renewable energy (≥ 30%)	10
C	Minimal measures: Minimal Green façade or roof (~5%), 10% Solar	15
D	No measures	25

3	Financial compensation
A	Compensation budget: 1Mio €
B	15pts
C	- 5 points for each 50k over the budget
D	+5 points for each 50k under the objective

! Strictly secret information!

Your company *H-Karl GmbH* has a budget of 1 Million EUR to compensate the impact of their construction. You need to make a decision who gets how much money from this budget. The other players don't know what is the total amount of the budget, play wisely to satisfy your needs on the other categories and meet the point goal.

The goal is to reach **40 points** in total, otherwise the hotel will not be built and you lose the negotiation.

▼ 🌱 Environmental activists "*The Green Hand*"

Introduction

You are a passionate member of **The Green Hand**, a growing environmental movement committed to protecting Monaco's last remaining natural spaces. For the past seven days, your group has organized

peaceful protests on the beachfront site recently acquired by construction company **H-Karl GmbH**. Your message is clear: the land should become an **eco-park**, not a luxury hotel.

This narrow strip of coastline is one of the **last untouched beach zones** in Monaco. It's home to a fragile and rare **coastal ecosystem**, including a rare **native frog species**, migratory birds, and unique vegetation. For The Green Hand, this land is not just scenic—**it is sacred**. You believe the destruction of this habitat would be irreversible and short-sighted, especially in an era of growing environmental responsibility.

Current Situation

Despite your protests and a wave of online and community support, the project has not been canceled. The mayor, Georges Marsan, has delayed his final decision, and the developer continues to promote the hotel's supposed benefits. The residents of Mona Covillage, whose villas face the proposed site, have quietly aligned with your cause—they too fear the loss of their tranquil view and local wildlife.

Your presence has drawn media attention and helped ignite public conversation about the direction Monaco should take. But the clock is ticking, and if the mayor bows to corporate pressure, the chance to preserve this space will be lost forever.

Problem

H-Karl GmbH insists their hotel will meet "green" standards, but your movement believes **no amount of rooftop gardens or energy-efficient bulbs** can justify the destruction of a **thriving, living ecosystem**. The company's past projects, especially in Milan, have raised environmental concerns—and you worry Monaco could suffer the same fate.

You're also concerned that the project is being fast-tracked without proper **environmental review** or public consultation. If no action is taken now, the natural heritage of this space—and the unique wildlife it supports—will be sacrificed for short-term profit.

Goals

1. **Stop the Hotel Completely**

   Demand that the land be reclassified as a protected conservation area or public eco-park.

2. **Defend Biodiversity**

   Emphasize the presence of the rare frog species and other wildlife that cannot be relocated or replaced.

3. **Propose Sustainable Alternatives**

   Suggest turning the land into a **nature reserve**, a **community eco-garden**, or an **open-air environmental education space**.

4. **Mobilize Public Support**

   Use press coverage, online campaigns, and environmental law to pressure the mayor and raise awareness.

5. **Hold the Line**

   Do not accept compromises that still result in major development on this land.

Task

As a representative of The Green Hand, your mission is to convince the mayor, the residents, and the general public that **preservation is progress**. You must present a compelling case that includes:

- **Scientific evidence** of the area's ecological value
- **Emotional appeals** that show how nature connects us all

- **Examples of other cities** that prioritised green spaces over development

You may collaborate with residents to show unity, but your ultimate stance is clear: **this land must remain untouched.** Once nature is gone, **it cannot be rebuilt.** This will be a very complicated task, especially because it seems like the Mayor is with H-Karl, they may propose money, accept **the highest amount** if you can, it will be helpful for the future projects.

🎯 Preserve local biodiversity and frogs and reduce environmental harm.
✅ Environmental protection, especially the frog habitat and green land.
🚫 No frog sanctuary or less than 15% green spaces.
🔄
Trade-offs: May accept a smaller hotel (max 5–8 floors) if eco protections are guaranteed and visible.

Decision parameters

1	Hotel Size	Points
A	12 floors (original plan)	0
B	8–10 floors	5
C	5–7 floors	10
D	3–4 floors (eco-hotel style)	15
E	No hotel	30

2	Environmental impact	Points
A	High measures: ≥ 30% Green façade and roof, solar panels, frog sanctuary, mostly renewable energies (≥ 70%)	40
B	Medium measures: ≥ 15% Green façade or roof, partial renewable energy (≥ 30%)	20
C	Minimal measures: Minimal Green façade or roof (~5%), 10% Solar	10
D	No measures	0

3	Financial compensation
A	Compensation objective: 400k
B	22pts
C	4 points for each 50k over the objective
D	-4 points for each 50k under the objective

EXPLANATION: The objective is to get the highest financial compensation. We are not sure how much they are able to compensate. If you get the 400k, you get 22 points. If you get 450k, you get 4 extra points, so 22+4=26 points. Otherwise, if you get 350k, you get a malus of 4 points, so you get 22-4=18 points.

Your goal will be to get **the best terms** during the negotiation. It will be hard but you can do it, it means you get them to build respecting the environment and compensate you for the losses.

▼ 👱 Inhabitants association *"Mona Covillage"*

Introduction

You are a representative of the inhabitants association called Mona Covillage, an organisation here to support peoples and defend a citizen driven view of Monaco city. You are a united community dedicated to preserving the quality of life in your cherished coastal village and are deeply committed to ensuring that any development respects the tranquility and views that make your village unique.

Current Situation

Mayor Georges Marsan has delayed his decision, while the developer promotes the hotel's benefits. Residents of Mona Covillage, aligned with The Green Hand, fear losing their peaceful views and local wildlife. Media attention has sparked public conversation, but corporate pressure threatens the village's quality of life.

The proposed development by H-Karl GmbH risks obstructing beach views, increasing traffic, and disrupting neighborhood tranquility. Lack of public consultation raises concerns about sacrificing the village's character for profit. Advocating for financial compensation, community investments, and eco-friendly solutions is crucial to preserving the neighborhood's unique qualities.

Problem

H-Karl GmbH's proposed hotel development threatens the tranquility of your village. You are concerned that their past projects indicate a pattern that Monaco could follow, disrupting your peaceful environment.

You fear the project is being fast-tracked without proper **public consultation**, risking your quality of life and the unique character of your village for short-term profit. A tall hotel could obstruct your cherished views, increase traffic, and disrupt the serene environment you hold dear.

Goals

1. **Preserve their scenic beach views and neighborhood tranquility.**

   Demand that any development respects the existing views and tranquility of the neighborhood.

2. **Secure financial compensation for potential property value loss and disruption.**

   Seek compensation for any potential loss in property value and disruption caused by the development.

3. **Advocate for community investments, such as local infrastructure improvements.**

   Push for investments in local infrastructure to benefit the community as a whole.

4. **Support eco-friendly solutions to minimize negative environmental impacts.**

   Promote the use of eco-friendly practices and solutions to reduce the environmental footprint of any development.

Tasks

As a representative of Mona Covillage, your mission is to ensure that the development respects the community's values and environment. You must present a compelling case that includes:

- **Community evidence** of the area's unique character and quality of life
- **Emotional appeals** that show how the current environment connects and benefits the residents
- **Examples of other developments** that have respected and enhanced their surrounding communities

You may collaborate with environmental groups to show unity, but your ultimate stance is clear: **the development must respect and preserve the community's values and environment.** Once the character of the village is gone, **it cannot be rebuilt.** This will be a very complicated task, especially because it seems like the Mayor is aligned with H-Karl; they may propose financial compensation, accept **the highest amount possible** if you can, as it will be helpful for future projects.

🎯 Protect sea view, peace, and neighborhood character.
✅ Avoid hotel or have the smaller hotel possible, ensure compensation
🚫 Large-scale hotel (12 floors) without compensation or landscape protections.
🔄
Trade-offs: May accept a mid-size hotel (8–10 floors) if there is financial compensation, eco design.

Decision parameters

1	Hotel Size	Points
A	12 floors (original plan)	0
B	8–10 floors	5
C	5–7 floors	15
D	3–4 floors (eco-hotel style)	25
E	No hotel	30

2	Environmental impact	Points
A	High measures: ≥ 30% Green façade and roof, solar panels, frog sanctuary, mostly renewable energies (≥ 70%)	35
B	Medium measures: ≥ 15% Green façade or roof, partial renewable energy (≥ 30%)	15
C	Minimal measures: Minimal Green façade or roof (~5%), 10% Solar	5
D	No measures	0

3	Financial Compensation
A	Compensation objective : 400k
B	18pts
C	3 points for each 50k over the objective
D	-3 points for each 50k under the objective

EXPLANATION: The objective is to get the highest financial compensation. We are not sure how much they are able to compensate. If you get the 400k, you get 18 points. If you get 450k, you get 3 extra points, so 18+3=21 points. Otherwise, if you get 350k, you get a malus of 3 points, so you get 18-3=15 points.

Your goal will be to get **the best terms** during the negotiation. It will be hard but you can do it, it means you get them to build respecting the environment and compensate you for the losses.

Hotel Controversy Deepens: Frogs, Funds & Fractures at the Beachfront

What was supposed to be a straightforward luxury hotel project has quickly turned into one of Monaco's most polarizing debates in recent years. With the beachfront property already acquired by German developer H-Karl GmbH, plans for a 12-story, 5-star hotel have hit a wall of local resistance.

Environmental group "The Green Hand" has been camping on-site for a week, citing destruction of local biodiversity and calling for the area to become an eco-park instead. Their protests have been echoed by the residents of Mona Covillage, who fear the loss of their seaside views — and their property value.

Meanwhile, a leaked anonymous report suggests H-Karl's Milan project caused more ecological damage than initially reported. The company has denied all allegations, but social media backlash is growing.

The mayor, Georges Marsan, has delayed the official green light for the hotel's construction, prompting concern from investors and whispers of political hesitation. "The frogs were here before the yachts," one protestor told Le Monaco Journal.

Spotted: H-KARL'S Rival and Mayor Seen at Tea Together

Eyewitnesses report that Mayor Georges Marsan was recently seen sharing tea and quiet conversation at the Hôtel Hermitage with representatives of Green Haven Group — a direct competitor of H-Karl GmbH, and vocal supporter of eco-conscious developments.

The sighting has sparked speculation: Could Monaco's luxury hotel deal be shifting toward a greener future? Or is the mayor simply enjoying polite company?

The mayor's office has offered no official statement, but insiders whisper that H-Karl isn't happy.

Article Talk Read Edit View history Tools

From Wikipedia, the free encyclopedia

Georges Marsan (born 20 March 1957) is a Monégasque politician serving as mayor of Monaco since 2003. A member of the Communal Evolution (EC) party, he was first elected to the Communal Council of Monaco in 1991. Marsan is a pharmacist by trade.

Georges Marsan	
Mayor of Monaco	
Incumbent	
Assumed office 1 April 2003	
Preceded by	Anne-Marie Campora
Personal details	
Born	20 March 1957 (age 67)
Nationality	Monégasque
Children	1 son, 2 daughters
Parent	Gérard Marsan
Residence	Monaco
Alma mater	University of Montpellier
Occupation	Pharmacist

Early life

Georges Marsan was born in 1957.[1] Both his father Gérard andgrandfather Antoine were pharmacists.[2] The family pharmacy was established on Rue Grimaldi in 1908.[2] Shortly after, it was relocated to the Place d'Armes in La Condamine.[2][3] Meanwhile, one of his grandfathers was a neighbourhood mayor who helped write the Constitution of Monaco in 1911 in the wake of the Monégasque Revolution.[2]

Marsan graduated from the University of Montpellier in pharmacy in 1979.[1]

Career

Marsan started his career as a pharmacist in the family business on the Place d'Armes.[2] He serves as president of the Ordre des Pharmaciens de Monaco.[4] In 1991, Marsan was asked to run for the Monaco Communal Council by now-former Mayor Anne-Marie Campora; he was elected.[1]

He has served as mayor of Monaco since 2003.[1] He has been elected five times (2003, 2007, 2011, 2015, 2019).[5] He was the sole candidate in 2011 and 2019.[6] He won by 75% in 2015.[7]

Marsan is Grand Officer of the Order of Saint-Charles.[1]

Personal Life

Marsan is married.[1] He has a son and two daughters.[1] He used to like playing with frogs a lot. Maybe to make to make some experiments?

▼ 🔪 Gap Contract

This agreement is entered into on the date of _____ between the City Council, represented by the Mayor *George Marsan*, *H-Karl GmbH* (hereinafter referred to as “Developer”), the Eco Activists Alliance *The Green Hand*, and the Inhabitants’ Committee *Mona Covillage*. The purpose of this contract is to define the terms for the proposed hotel construction project in the coastal area of Monaco.

§1 – Hotel Size

The parties agree to construct a building of ____ floors.

(Choose one exact number between 0-12)

§2 – Environmental Impact

The Developer agrees to implement the following environmental sustainability measures:

☐ High measures: ≥ 30% green façade and roof coverage, solar panels, frog sanctuary, and ≥ 70% renewable energy use

☐ Medium measures: ≥ 15% green façade or roof, partial renewable energy use (≥ 30%)

☐ Minimal measures: ~5% green coverage, 10% solar panel coverage

☐ No environmental measures

§3 – Financial Compensation and Local Benefits

The Developer commits to the following compensation package:

- Eco NGO: _____ €
- Inhabitants: _____ €
- City Project Fund: _____ €

= Altogether: _____ €

§4 – Final Agreement and Signatures

By signing this agreement, all parties confirm their consent to the above terms and commit to cooperative implementation. Modifications must be made in writing and agreed upon by all signatories.

▼ Teacher Note

Introduction and story line

This simulation is a **multi-party, multi-issue negotiation** involving four stakeholder groups:

- A hotel construction company (*H-Karl GmbH*)
- A residents' representative (*Mona Covillage*)
- An environmental activist group (*The Green Hand*)
- The mayor of Monaco (*Georges Marsan*)

The central conflict revolves around the proposed construction of a tall luxury hotel on beachfront property. The exercise is designed to simulate real-world tension between economic development, environmental protection, political interests, and community values.

Materials

- Per team: 4x public information, 4 different role descriptions, 1 Gap Contract
- Teachers note
- Space setup: groups sit separately for prep, then on one table for the discussion

Each group receives confidential role information with their background, goals, no-gos and possible trade-offs.

Game timeline ~1h 10Min

(Split into groups and hand out materials first)

Introduction: 5 minutes

Read: 15-20 minutes

Play: 30 minutes

Fill out contract: 5 Min

Conclusion and ROE: 15 minutes

Debrief & Reflection

(Write all the results on the blackboard to compare the dominant roles in each participating group)

Encouraging the students to reflect on following questions:

1. **What strategies worked best?**

   This question encourages strategic self-awareness and helps students connect theory to action. It fosters reflection on which tactics were effective (e.g. anchoring, bundling issues, using objective criteria) and how trade-off deals played a role between the different categories.

2. **Did you form alliances or coalitions? Why or why not?**

   In real-world negotiations — especially in politics, urban development, or stakeholder management — influence is often exercised through alliances rather than direct confrontation. This question

helps students reflect on wether shared goals were enough to sustain cooperation, but also the risks and rewards of trusting others in a complex negotiation.

3. **How did new information about other roles affect your negotiation strategy?**

   This question highlights the dynamic nature of real negotiations, where full transparency is rare. Students learn to adapt and revise their strategy based on evolving context, information leakage, or spontaneous cooperation.

Learning objectives (TODO: write in detail and make connections to our project)

1. **Separate the problem from the people**: emotional tensions (the residents' attachment to the frog population) can be distracting from the actual problem)
2. **Understanding each other's true interests**
3. **The result doesn't have to be binary**: the story leaves room for compromises or even win-win situations like:
   - The hotel incorporates an eco-park
   - The residents get partial ownership or input in green space management
   - Instead of viewing the hotel as a threat, residents could benefit from added property value or job opportunities in an eco-friendly, luxury establishment
   - The activists managed to convince the mayor and the residents that the projects can have bad environmental incomes
4. **Using objective criteria**: referring to environmental standards or other legal regulations
   - Monaco's construction and environmental laws
   - "Green Building" certification

Point System

Our Point system works in a classic way where you have to agree on a decision and you get a gien number of points associated. Participants will need to justify their decisions to others based on role priorities.
They will only see their
own role's prioritisation. The hotel company is the only one who has to meet a minimum of 40 points to be able to make the project. It is very important that student do not share this information. It is forbidden for them to talk about points or their objectives. Points are given following 3 categories :

https://docs.google.com/spreadsheets/d/1NMotBZza0_9g04cmoJZiAanumpxyTFt2FMmKKQcIxbo/edit?usp=sharing

1. Hotel Size and Construction Scope

Outcome	Mayor	H-Karl GmbH	Eco Activists	Inhabitants
12 floors (original plan)	15	30	0	0
8–10 floors	25	25	5	5
5–7 floors	20	15	10	15

Outcome	Mayor	H-Karl GmbH	Eco Activists	Inhabitants
3–4 floors (eco-hotel style)	10	10	15	25
No hotel	0	0	30	30

5 Bonus points for H-Karl GmbH if they on the higher end of the floor category.

2. Environmental Protection Measures

Outcome	Mayor	H-Karl GmbH	Eco Activists	Inhabitants
High measures: ≥ 30% Green façade and roof, solar panels, frog sanctuary, mostly renewable energies (≥ 70%)	20	5	40	35
Medium measures: ≥ 15% Green façade or roof, partial renewable energy (≥ 30%)	30	10	20	15
Minimal measures: Minimal Green façade or roof (~5%), 10% Solar	10	15	10	5
No measures	0	25	0	0

3. Financial Interests & Compensation

Mayor	**H-Karl GmbH**	**Eco Activists**	**Inhabitants**
City project fund objective :400k	Compensation budget : 1 000 000€	Compensation objective :400k	Compensation objective :400k
17pts	15pts	22pts	18pts
3 points extra for each 50k over the objective	5 points for each 50k under the budget	4 points for each 50k over the objective	3 points for each 50k over the objective
-3 points for each 50k under the objective	-5 points for each 50k over the budget	-4 points for each 50k under the objective	-3 points for each 50k under the objective

To add more challenge and randomness to the decision-making process, this third category doesn't have fixed amounts but a buget on the company's sie and fund goals on the stakeholders. This allows everyone to play more freely with their role and emphasises negotiation skills over choosing a line from a table. Each participant's objectives are private, and the difficulty can be easily adjusted by changing the objectives. We chose the budget to be slightly lower than the total compensation asked, so compromises are unavailable.

All the points are distributed in a way so that every role has a similar chance to get a certain amount of points. Although only one role has a minimum amount to reach: the construction company. According to their success or failure it is decided if the negotiation is won and the construction can begin.
